
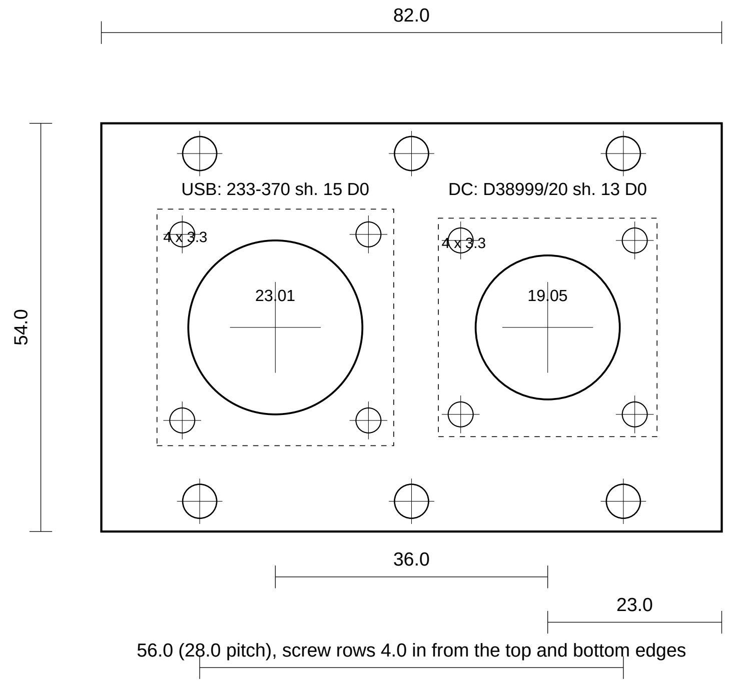
SHEET 1 of 2: WALL. MeshSat field kit, Peli 1520 base, the BACK long wall (hing
along the long axis from the case centre, Z up from the cavity floor.

Two hole-saw holes for the receptacle bodies and six M4 clearance holes for the
level with the inside floor (transfer the height from inside).

The plate, not the wall, carries the sealing faces: the 1520 inner wall drafts about
vendor/peli/wall2.py), so a flanged receptacle cannot seal on the case itself.

Why the back wall: the front wall carries the handle, the pressure valve, two rib clu
walls are too narrow between their ribs. Every through-hole here keeps 7 mm or m
leg drill points at 67 to 71 mm above the floor, appendix 25.1); the hinge sits at th

Cut order: mark, drill the six 4.5 holes, hole-saw the two 29 holes from outside, de
the floor begins 16.7 mm up; nothing here reaches it.



100 mm at 1:1 (print at 100 percent, no fit to page)

SHEET 2 of 2: CONNECTOR PLATE, 82 x 54 x 3 mm aluminium (5052 or 6061),
EPDM, same outline and holes, between plate and wall.

Shore DC: Glenair D38999/20 shell 13 wall mount with round holes (D0), front pa
flange 28.9 square. Its own gasket seals to the plate.

USB host: Glenair 233-370 shell 15 wall mount D0, front panel mount: hole 23.01
mm plate is inside its 1.6 to 6.35 mm panel range.

Both receptacles: flange outside, gasket, plate, then the receptacle's own nuts ins
16 stainless, washers both sides, Nyloc nuts inside; torque 1.2 N m in a cross pat
