Case interior, plan view: Peli 1450 with the 1450PF frame, the board set and the pack (design drawing of an unbuilt prototype)

Orange solid: cavity wall at the floor (Peli STEP); orange dashed: at the rim Z 108.97; orange dotted: flat floor to the R 15.88 fillet.
Brown dash-dot: 1450PF frame window; brown dotted: the frame skirt's inner face (M21d); brown thin: the frame's outer face at the skirt bottom (Z 86.00; 0.30 wider per side at its widest). Grey dashed: face plate C1 377.2 x 263.0 (chosen); grey dotted: panel1450.py's plate 377.2 x 263.0 (as coded, superseded).
Brown solid: C6 setting legs (column; the dashed box is the foot on the flat floor). Black dots: the four M3 rods. Blue ticks: C2 arrestors at Z 59 on the RF entry plates; grey x: panel1450.py's wall jacks at Z 59 (as coded, superseded).
NOT SHOWN: parts on the boards (only board B's outline), cables and jumpers, the pack's hold-down (not designed, S-27), the lid and the QMX tray, the Xenarc and e-paper on the face, fasteners, and any tolerance band: CASE-MARGINS.md section 3 holds the margins, 35 of 70 OPEN.
Board P's place at the block's south end is INFERRED (ASSEMBLY.md section 3, CASE-MARGINS.md M5); its hold-down and the block's are owed. Nominal geometry establishes no fit (CASE-MARGINS.md section 1).
